

Genesis

Genesis

- Big Data Processing Cloud Platform

Synopsis

Cloud platform dedicated to virtualized big data processing based on commercial system (x86) hardware and open source software (virtualized system software and big data processing middleware)

Function and Performance

- Cloud hardware platform (cloud computing server and cloud storage server)
- Hadoop-based virtual cluster dedicated to big data processing
- Open source-based cloud resource management and monitoring environment
- Support VM creation in less than 10 seconds

	Physical Host	VM
Scale	6 Machines (ALL : 44 Core) (2 : 6 Core, 4 : 8 Core)	19 VMs (38 Core) (Each : 2 Core)
CPU	AMD Phenom(tm) II X6 1055T AMD FX(tm)-8350	-
Mem	144 GB (16GB*2Hosts + 28GB * 4Hosts)	72GB (4GB * 19 VMs)
DISK	7TB	380GB (20GB * 19 VMs)
Network	1 Gb Network	
OS	Dom0, DomU : Debian Wheezy Kernel : Linux-3.9.0	
Extra	Hypervisor : Xen 4.3 (Unstable) Cloud Management Stack - OpenNebula 4.0 - Ganglia 3.5.0	VM Type : PVM Boot Type : PVOPS

Platform Provisioning

Big Data Platform Deployment

- Phase 1: Platform Selection
- Phase 2: Virtual Resource Configuration
- Phase 3: Platform Configuration
- Phase 4: Deployment Status
- Application Deployment

Step1. Select **ONE** of the Platform that you want to deploy

Category	Suite Composition
Event Processing	Esper CEP Drools
Data Analysis	R Hadoop Hadoop + HBase Hadoop + Mahout
Web Services	Tomcat Nginx
Simulation	SUMO

Infrastructure Provisioning

Big Data Infrastructure Deployment

- Phase 1: Virtual Resource Configuration
- Phase 2: Deployment Status

Step1. Specifying Virtual Hardware

- VCPU(s): 2 VCPUs

- Memory: 2 GB

Step2. Specifying Number of Virtual Computing Resource

Number of VMs

Step3. Select **ONE** of the Operating Systems for the Virtual Computing Resources

Step4. Naming your Big Data Infrastructure

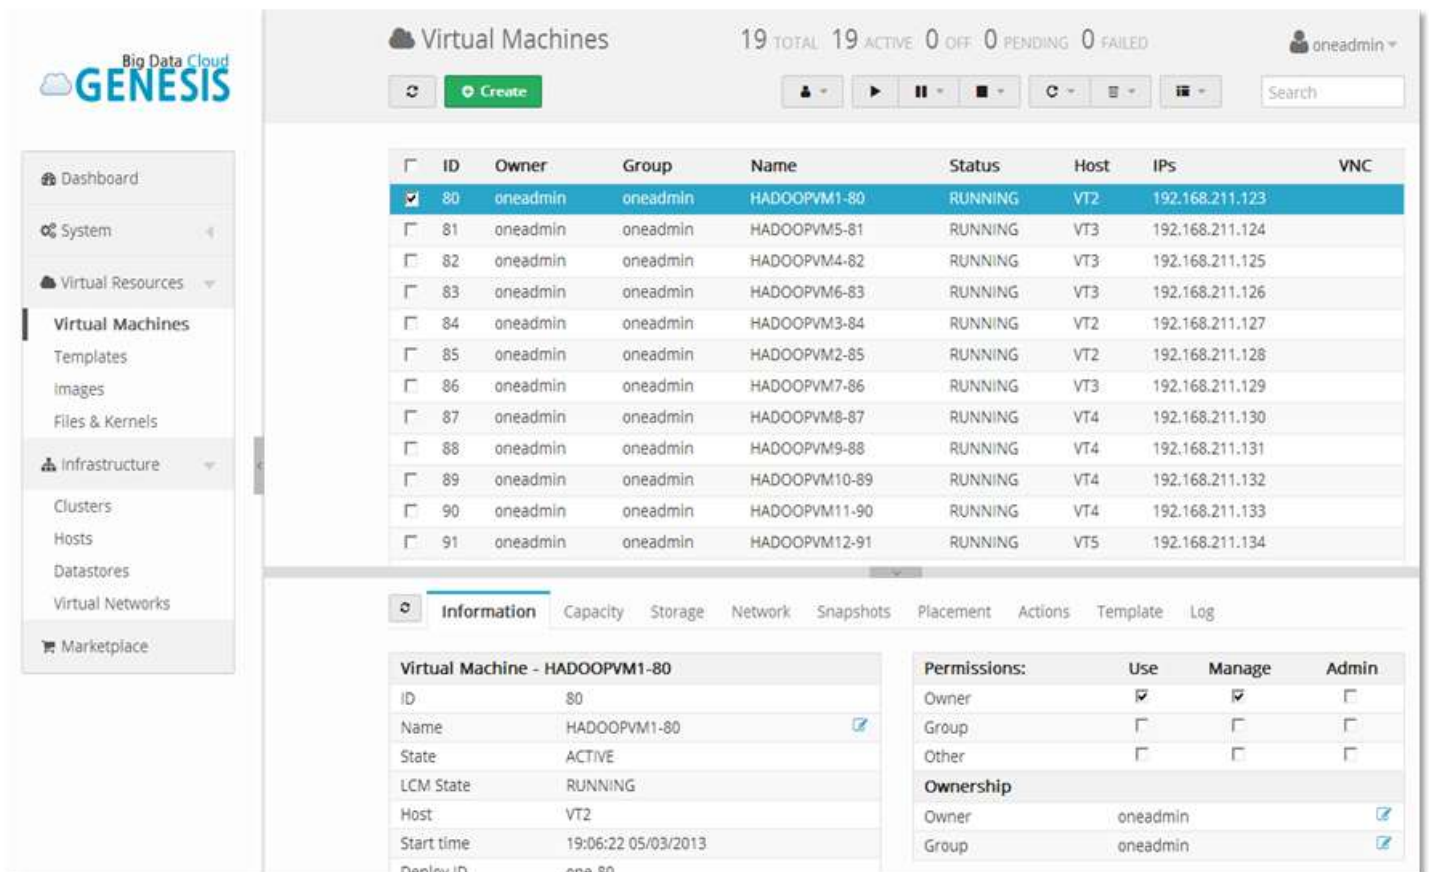

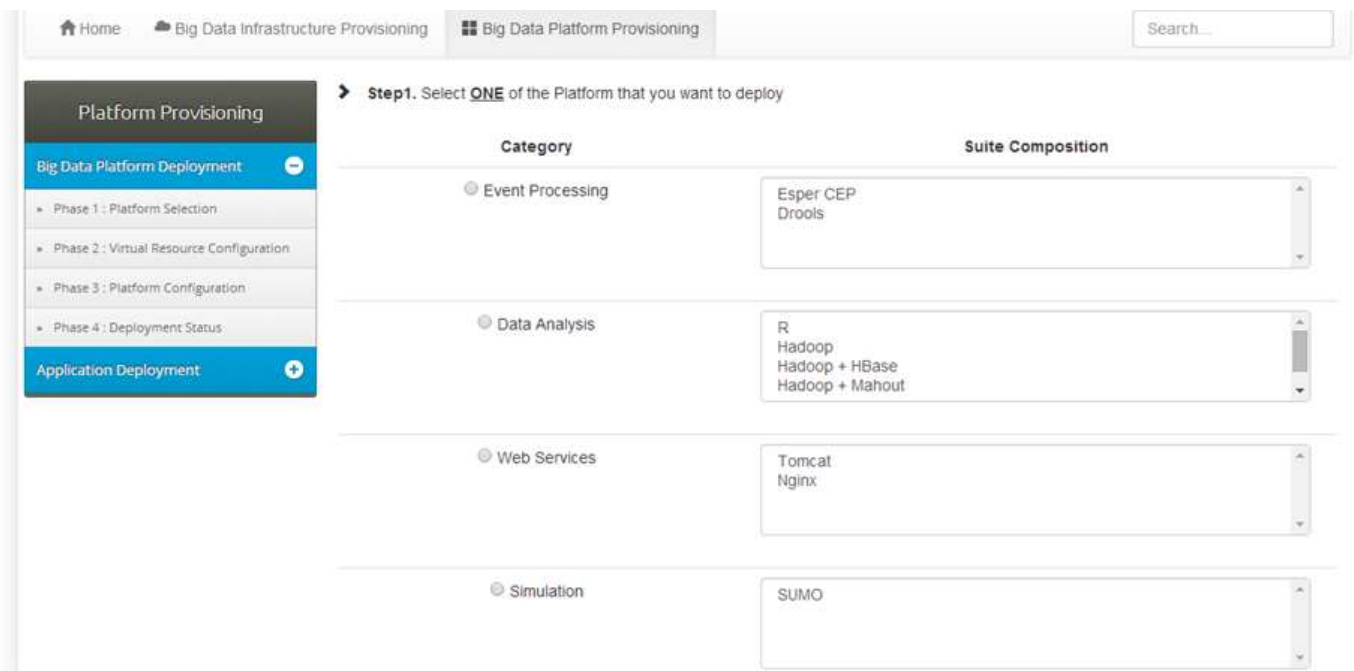

Cluster Name :
